# STEVE'S COMMENTS

Welcome to the annual Peel Forest January Sire Sale

This is the third year we will offer the English Warnham and Woburn cross 3yr old sire stags. The line-up this year are animals we have bred for the first time and include new blood lines and some outcrosses.

We are very pleased with the velvet stags for sale with an average is 7.15kg, a big lift from previous years. We have retained a late cut 3yr old who cut 9kg. We would also like to congratulate Hamish Smith on cutting 9.3kg off his 4yr old son of Walton, up from 6.8kg in last year's sale.

We are very pleased to have won the 4yr section of the South Canterbury/North Otago velvet competition with another son of Walton called Zebulon. These English stags certainly 'go on' and their ability to pass on these velvet traits is very strong as can be seen with exceptional velvet EBV's.

The trophy 3yr old stags, as you will see, are for sale by private treaty this year. This means they are for sale as you read this. They can be viewed anytime, just give me a call. You are most welcome to come for a closer look. There certainly are some interesting animals this year with beam and structure better than we have ever had. Video's and photos will be updated regularly to our website as they progress. All details, pedigrees and stats ect can be viewed on the PFE website also.

The sale will take place at the original complex next to the office by the homestead. There will be an opportunity to view the trophy stags for sale that are being sold by private treaty. This will happen after the auction of the velvet stags.

Good luck with your purchases, and as always, we stand by the stags we sell. From the team at Peel Forest Estate we wish you are merry Christmas and see you in the New Year..

Regards,

Steve Blanchard

# JOHNE'S RESILIENCE

## GROUND BREAKING JOHNE'S RESEARCH AT PEEL FOREST ESTATE

The annual cost of Johne's disease to the New Zealand deer industry in 2011 was estimated at least \$8.8 million. Even more importantly, the cost of Johne's disease on farms with heavily affected deer herds can be huge, ruining the profitability of your deer unit.

For the last ten years Peel Forest Estate has made a serious commitment to breeding Johne's Resilient deer on the property and is leading the way with an industry breaking research project with Dr Frank Griffin, Head of Microbiology at the University of Otago.

There have been huge gains in the research by not only reducing the presence of Susceptible animals but more importantly identifying Resilient bloodlines. This breakthrough is even more important due to the fact Colin Mackintosh from Agresearch has identified the powerful heritability of either Susceptibility or Resilience to Johne's in deer. The heritability of the Johne's resilient trait ensures the ability of Peel Forest Estate stags to fight the disease on our client's properties.

In Colin Mackintosh's paper following his trial on heritability he comments "the offspring of the S (Susceptible) sire was significantly more severely affected than those of the R (Resilient) sire. Most of the Resistant, but not the Susceptible, showed evidence of resolving lesions and a reduction in M.A.P (Johne's) after challenge". The paper went on to say "the 5 male offspring gained significantly more weight than the 9 S offspring over the 49 week study (70.3kg versus 59.8kg) despite being 2.8kg lighter at the start". This difference was statistically significant and even more significant because the S sire had a higher breeding value for 12 month weight.

Further to this research Peel Forest Estate are now going to look into the possible improvements to meat yield and quality from progeny with Johne's resilience as well as the proven on farm productivity benefits.

All stock at Peel Forest Estate are continually challenged by Johne's which has resulted in a radical test-cull, natural and genetic selection for Johne's resilience. The heritability of the Johne's resilient trait ensures their ability to fight the disease on your property.

# SIRE STAG CARE AND MANAGEMENT

Sires are the most valuable animal in the deer herd. They carry the genetics that will determine the future production of your herd. The welfare and 12 month health programme cannot be compromised if you wish to get the best from your sires.

## ON ARRIVAL

Stress is at a high level when your new stag arrive at your property. He has left familiar surroundings and mates he has lived with in a social group of around 40 animals of the same age. His arrival can be made a lot less stressful if you follow a few simple rules.

1. Your stag should arrive as early as possible to settle in (preferably before February)
2. Having a few animals in the yard when the stag is unloaded is important.

He should be introduced to a small group of similar age (10-15 animals). Never put with older stags or spikers. Ideally if the hinds he was to mate were nearby he could go directly into the mob. Early fawns should always be the aim.

## THE ROAR

A 3 year old stag will mate 40-50 hinds comfortably if he does not have to travel too far or has no competing stag nearby. When you put your stag out is your choice (the earlier the better) but be aware it can take 5-10 days to be accepted into the mob before he begins mating.

It is possible to mate far more hinds than this but you risk a greater spread over calving and marked loss in body weight and performance in a young stag.

When the stags are taken out of the hinds minimize fighting by preparing a safe paddock (with plenty of feed, shade and water) by taking the most dominant stag (older) first. Avoid a very hot day.

Do not put stags used for mating with ones that have not been as this can cause excessive fighting.

## ANIMAL HEALTH

Your stag will have been drenched and coppered before leaving Peel Forest Estate.

As soon as the sires have settled down after the roar it is good practice to give them a drench, copper and a mineral booster. Hemo 15 is one option. This should be done no later than the end of May. He is at his most vulnerable state and parasites need to be addressed as soon as possible after the roar.

# CONDITIONS FOR SALE

Sale will be conducted in accordance with conditions of sale as set down by South Canterbury Stock and Station Agent's Association, copy of which is exhibited at sale venue, and other terms set out in this catalogue.

Deer will be offered as catalogued, subject only to final draft.

Intending purchasers are required to register at the office prior to commencement of sale to obtain buyer's number and advise appropriate stock and station agent.

Each lot shall become the property and responsibility of the purchaser on the fall of the hammer.

Terms are strictly cash unless prior arrangements are made with one of the selling agents.

Sale will be conducted GST exclusive.

Purchaser must give complete delivery instructions to the office, using one of the delivery instruction sheets in the back of this catalogue and receive delivery docket before removing animals.

The vendor will offer a commission of 4% to non-participating companies. Notice should be given in writing to the vendor 24 hours before the commencement of sale.

## **SPECIAL CONDITIONS**

No animals, embryos or semen sold by Peel Forest Estate or their germplasm, any subsequent progeny or germplasm, including the semen and germplasm of that progeny, may be supplied to any third party without the written permission of Peel Forest Estate.

This condition does not affect normal commercial deer farming or stud farming or their normal sales of semen or embryos as it only applies to entities with the primary function of commercial semen/germplasm activity.

It is a condition of sale of any animals, embryos, or germplasm or semen sold by Peel Forest Estate, that the purchaser agrees to include the following clause as a condition of any subsequent sale or gift of any animal,

embryo, semen, germplasm or subsequent progeny or germplasm to a third party – "the purchaser acknowledges that it will not supply any animals, embryos, semen or germplasm to any commercial semen/germplasm marketing or sales entity, and will ensure that this clause is inserted as a condition of any sale or gift of any animals, embryos, semen or germplasm".

## **SALE**

Animals will be penned by 11.30a.m. on the day of the sale. All stags will be velveted which will remain the property of Peel Forest Estate.

## **CERTIFICATES**

Certificate copies of TB accredited free status, Johnes Clear Test and pedigree will be provided to the purchaser and are available for inspection by all potential clients.

## **GENERAL INSURANCE**

Insurance facilities will be available at the office.

## **HERD HEALTH STATUS**

Peel Forest Estate has completed a re-accreditation TB whole herd test. We have a C10 plus status. All stags have received a veterinarian physical testicular examination.

## **GUARANTEE**

Should a stag prove to be infertile from natural causes it will be replaced. In all events the Seller will not be held responsible for loss of production or consequential losses on any animal sold. Notification of any dissatisfaction must be made within 12 months of the date of sale. Subject to these terms, the vendor makes no warranty about any animal sold.

## **DISCLAIMER**

While these details are prepared with the greatest of care Peel Forest Estate accept no responsibilities for omissions and missed descriptions.

# USING DEERSELECT DBVS

## WHAT IS DEERSELECT?

DEER Select is the genetic evaluation system for the deer industry. DEERSelect can assist you in your purchase by providing an indication of the relative progeny performance of each stag. DEERSelect is a simple system to use. Each animal has an individual "Breeding Value" (or BV) for certain traits which are related to economic profitability. By comparing BVs between animals, you can assess the relative merits of animals for different traits.

## WHAT DO THE DIFFERENT BVs MEAN?

BVs are available for growth and antler traits (the system will be expanded over time to consider other economically important traits). The traits reported are:

## HOW DO BVs RELATE TO PERFORMANCE?

BVs are expressed in actual units of production (kg of liveweight or velvet), so are directly related to expected impacts on performance. An animal passes on half of its genes to its offspring (the other half come from the other parent). So if we take an example of 2 stags, one with a 12-month weight EBV of +12 kg and the other of +8 kg, and mate them to the same group of hinds, the first stag will pass on an impact of +6 kg to his offspring, while the second will pass on +4 kg. Thus we would expect the offspring of the +12 stag to be 2 kg heavier at 12 months of age than those of the +8 stag (i.e. half of the difference in breeding value).

**12-Month Weight (W12BV)** - gives the animal's genetic merit for weight at fifteen months of age in kg. For example, a W12eBV of +10.0 means that the animal carries genes to make it 10 kg heavier than the base population at 12 months of age. For venison production, this is the trait deer farmers are paid on so should receive significant emphasis if purchasing genetics for venison.

**Mature weight (MWTBV)** - This compares the mature weight of hinds (i.e. 3+ years). Again, the values are expressed in kg live-weight. This trait is economically important for both venison and velvet production, as it is an indicator of how much feed is required to maintain an adult animal. Although it is expressed on a breeding hind basis, it is closely related to mature weight of adult stags as well.

Those seeking specialist velvet production genetics should look for low or moderate mature weight, combined with excellent velvet genetics. This will maximise the profit per hectare of your velvet enterprise by producing more velvet per stag and running stags at higher stocking rates.

For venison production, mature weight is somewhat correlated with 12-month weight. This means that if genetics are sought to breed replacement hinds, 12-month weight needs to be balanced with the mature weight to keep hind size (and hence feed costs) at an appropriate level. There may be considerations with handling ability too, depending on your individual preference. Mature weight is not economically important for terminal sires (concentrate on 12-month weight).

**Mature Velvet Weight (MVBW)** - This compares the weight of velvet produced by a mature velvet stag - values are expressed as kg of velvet cut at optimal time.

The MVBW is a significant driver of velvet profitability and should be considered along with likely impacts on velvet grade when comparing animals.

**Eye Muscle Area (EMABV)** - (sq cm) is calculated from measurements from live animal ultrasound scans and from abattoir carcass data. This EBV estimates genetic differences in eye muscle area. More positive EBVs indicate better muscling on animals. Sires with relatively higher EMA EBVs are expected to produce better muscled and higher percentage yielding progeny at the same carcass weight than will sires with lower EMA EBVs

**Weaning Weight (WWTBV)** - The WWTBV gives the animal's genetic merit for weight at weaning, in kg. For example, a BV-WWT of +3.0 means the animal carries genes to make it 3 kg heavier than the base population at weaning.

**Weaning Weight Maternal (WWTMBV)** - Milking ability; what a hind may contribute to her progenies weaning weight through her milk production

# Sire References

PEEL FOREST  
ESTATE  
RED DEER GENETICS

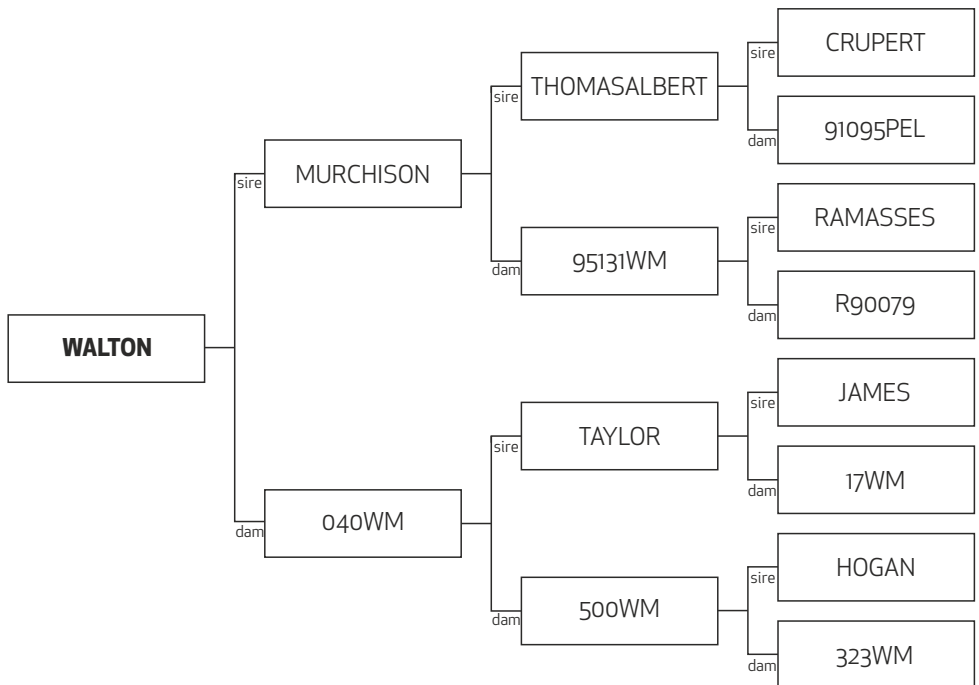

Walton  
Riley  
Johnboy  
Tomo  
Bowman  
The Duke

# WALTON

## Biography:

Walton is undoubtedly one of the most outstanding stags to ever come out of the Windermere stud. He is a Pure Warnham with very clean, heavy velvet with excellent heritability leaving some powerful young stags in his wake. Walton won the National Velvet Competition as a 2 year old cutting an impressive 5.8kg of SA velvet. At 3 years he cut 8.06kg SA2 and 4 years 9.9kg of SA2. This year he cut 12.6kg SA2 of very clean velvet.

# RILEY

**Birthdate:** 2004

**Biography:**

“RILEY” is a young PURE WARNHAM sire, bred by TRAVIS over our outstanding DAM.160 (also the dam of JAMES II). He is a very big stag who is passing on good size genetics. He has a very tidy antler style, long, clean and correct, and cut 8.5kg SAV at four years and 10.0kg of SA2 at seven years. We rate him extremely highly as a Windermere Sire.

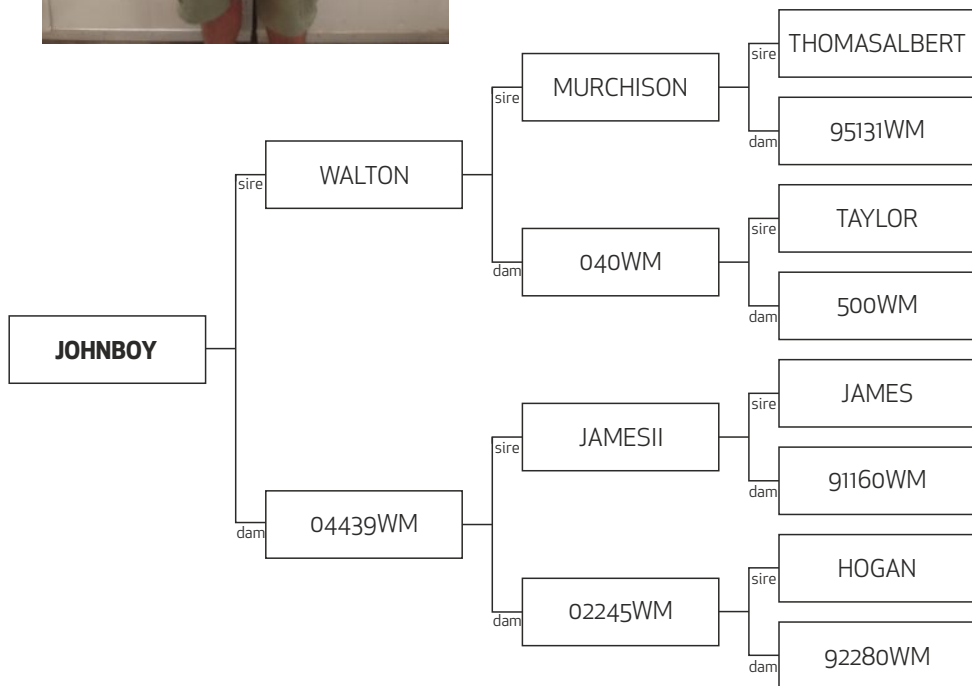

# JOHNBOY

## Biography:

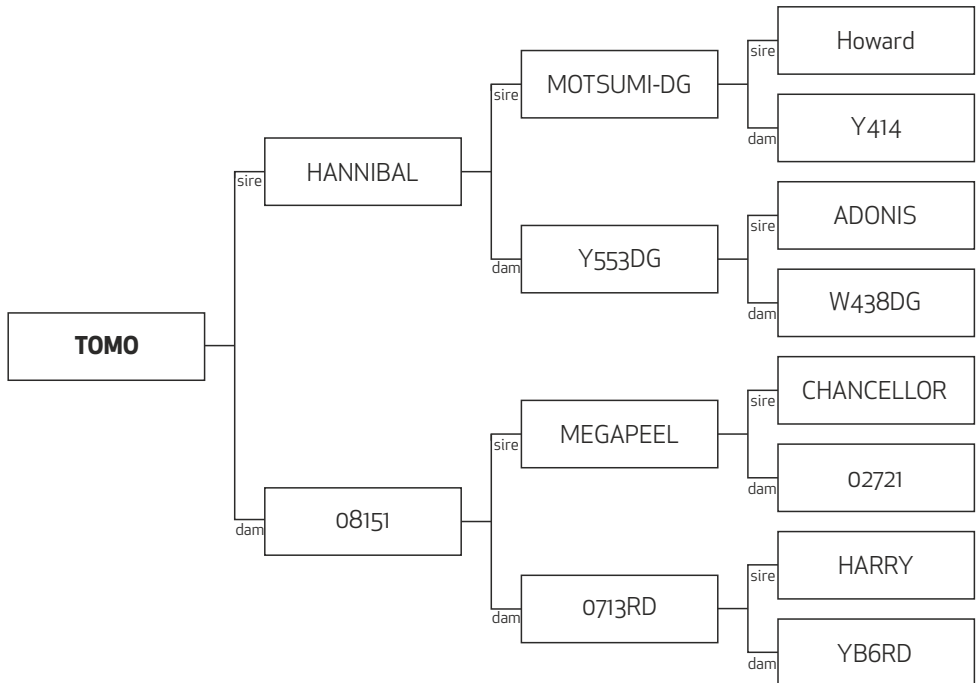

Johnboy is a stunning Walton son out of a top Windermere Stud JAMESII daughter. With over 90 progeny on the ground. Johnboy is leaving some amazing young stags in his wake. With solid 12 month growth rates and huge EBV's for velvet this Sire could outdo his father with pass on ability. He epitomises the direction Peel Forest is striving for. Clean, thick, attractive velvet with stocky English bodies. Johnboy is a hardy English stag with excellent temperament. Cut 9.6 SA2 at 6 years.

# TOMO

**Biography:** Tomo was one of the 5 stags produced through a ET program, all being of top quality. He was the sire we selected because of his thickness of beam and length in all tynes. Tragically, he broke his hind leg and had to be put down at 3yrs of age. Fortunately, we have some very good semen that we can carry on using this fine stag. Having only a very small group of hinds in this drop he has bred very well. He is leaving wide, heavy antler structure.

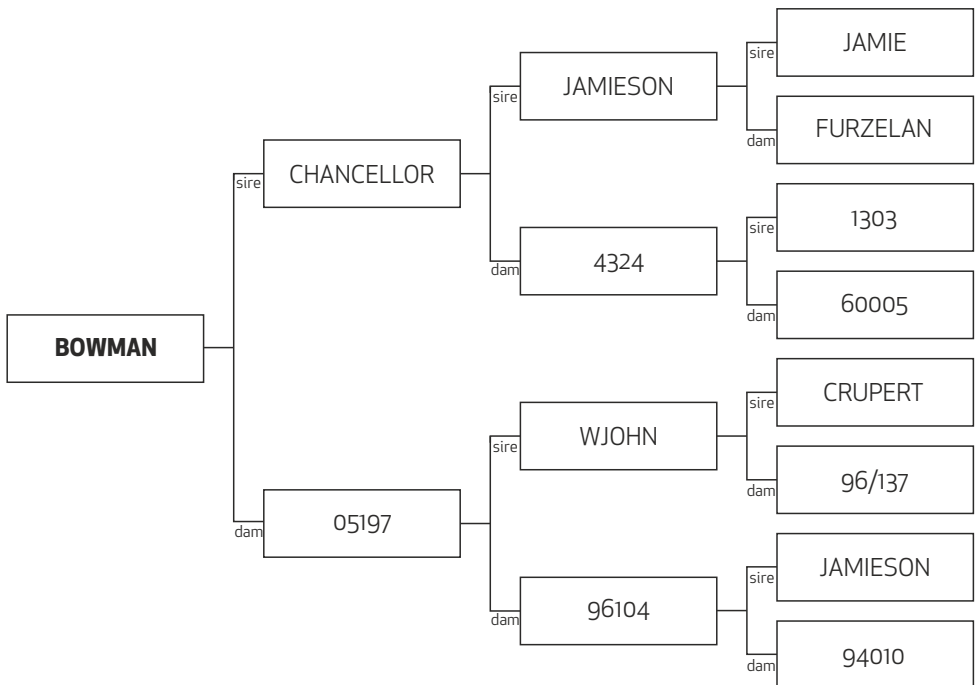

# BOWMAN

## Biography:

Bowman is a pure English son of Chancellor Peel, the Furzeland Master Sire who continues to lead the industry producing world class sons. Bowmans potency is fully shown in his first crop of 2yr olds, leaving incredible royal points, long lower tynes and great weight of antler.

The pure English bloodlines carry the greatest passion ability because of the potency of the pedigree tree and lineage, no more evident then Bowman. His Dam is by William John out of the best performing Furzeland hind 104 who was Dam of two previous Sires in Forest Monarch and Mathias.

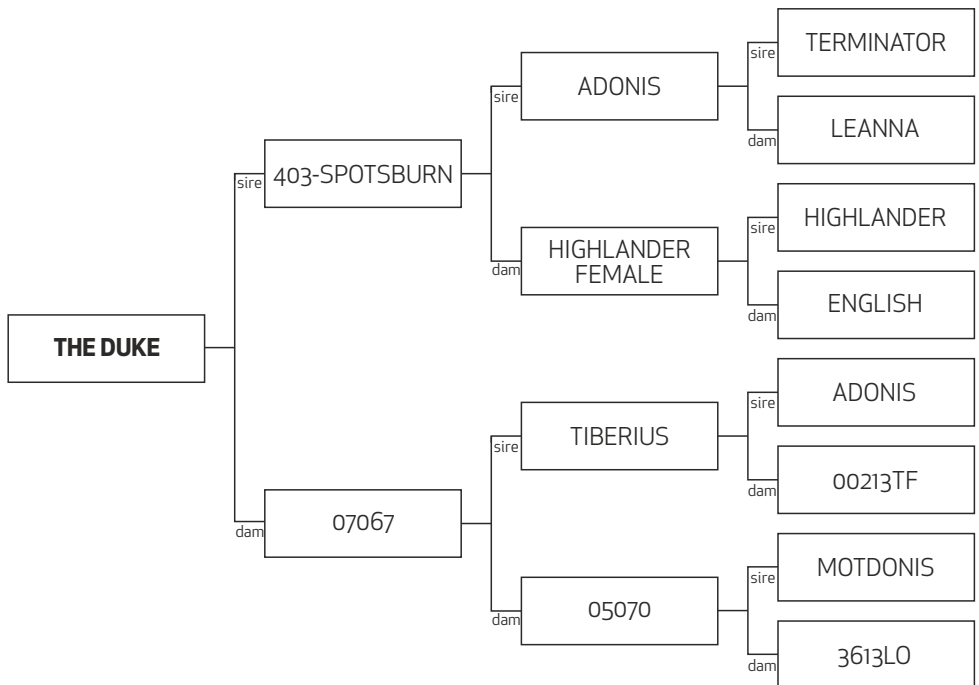

# THE DUKE

## Biography:

The Duke is a young sire who already is showing a high degree of pass-on to his off spring. He has huge beam inherited from his sire 403-Spotsburn. He also grows an extra bay sometimes on both sides. His tops are very long coming from a heavy deep crown. An attractive feature which we like is he only has kickers out of his royals. He also has excellent EBV's for growth of 11.92 for 12 month. The Duke is a heavy muscular dark coloured sire. At 4yrs he scored 496 SCI

# DIRECTIONS

## **Directions to Peel Forest Estate from Christchurch:**

Follow State Highway 1 through Ashburton south to Hinds. In the middle of Hinds turn right at the sign to Peel Forest, then 2nd left at sign to Peel Forest travelling along Hinds Arundel Rd approx. 15km.

At the “T” junction turn left onto Highway 72, go over to Rangitata River and then immediately turn right to Arundel. Up the hill and turn right to Peel Forest.

## **Directions to Peel Forest Estate from Dunedin:**

Travelling north from Dunedin, follow State Highway 1 through Timaru to Winchester, north of Temuka.

Turn left to Geraldine following Highway 72, through Geraldine, veering left after the one lane Orari Bridge, following sign to Peel Forest. Turn left into Peel Forest Rd after Coopers Creek Bridge and travel approx. 12 km.

After the Peel Forest Village roadside sign turn left onto Dennistoun Road, a single lane gravel road with a double row of beech planted on each side. GO straight through the white wooden gates which will be open and continue over to cattlestop into a woodland, up through the trees over the 2nd cattlestop and then fork to your right to the sales complex. Please park in the designated car park.

We look forward to seeing you!
